

LegalDocs Project Documentation

Project Overview

LegalDocs is a full-stack AI-powered legal document automation platform. Users answer questions, AI validates answers, Razorpay handles payments, Puppeteer generates PDFs, Digio enables e-signatures, and users manage everything from a dashboard.

Architecture

User -> Frontend (Next.js/React) -> Backend APIs -> PostgreSQL Database -> External Services (Claude AI, Razorpay, Digio, Email, Puppeteer) -> Response back to user.

Frontend

Built with Next.js, React, Tailwind CSS and TypeScript. Includes Home, Wizard, Dashboard, Login, Pricing, Admin and Profile pages.

Backend

Uses Next.js API Routes for authentication, payment verification, AI integration, PDF generation, email sending and database operations.

Database

PostgreSQL with Prisma ORM storing users, orders, payments, documents, invoices, support tickets and admin logs.

Folder Structure

app/: pages and APIs. app/api/: backend endpoints. lib/: reusable services. prisma/: schema. templates/: HTML document templates. storage/: generated PDFs and backups.

Authentication

Passwordless magic-link login. User enters email, backend creates secure token, sends email, validates token and creates a secure session cookie.

Payment Flow

Wizard -> Create Order -> Razorpay Payment -> Server-side Verification -> Webhook Confirmation -> Generate PDF -> Generate Invoice -> Email -> Download.

AI Workflow

Claude AI validates answers, checks inconsistencies and recommends fixes before document generation.

PDF Generation

Handlebars HTML templates are filled with user data and converted into professional PDFs using Puppeteer.

Email

Emails are used for magic login, password reset, payment confirmation, document delivery and invoices.

E-sign

Generated PDFs can be sent to Digio for Aadhaar-based electronic signatures.

Admin

Admin manages users, templates, pricing, support, analytics, payments, coupons and reports.

Security

Secure cookies, webhook verification, server-side payment validation, protected APIs, role-based access, environment variables and input validation.

Tech Stack

Next.js, React, Tailwind CSS, TypeScript, Prisma, PostgreSQL, Razorpay, Claude AI, Puppeteer, Digio, Resend and Vercel.

Interview Summary

LegalDocs is an AI-powered SaaS platform that automates legal document creation using dynamic questionnaires, AI validation, secure payments, PDF generation, email delivery and Aadhaar e-signatures with a modern full-stack architecture.
